

A PRACTICAL PRODUCT OVERVIEW

Run the institution. Keep the student in view.

Edumatica brings admissions, student information, teaching and campus operations into one configurable platform. The useful test is whether the right people can follow one student across those hand-offs.

For schools

Classes, attendance, assessments, guardian access, fees and library work around a student record.

For colleges

Admissions, programmes, courses, faculty, examinations, finance and campus services in context.

Four connected areas to evaluate

01 Admissions and CRM

Enquiries, follow-ups, applications, documents and admission decisions.

02 Student information

Student and guardian records tied to class, course and academic context.

03 Teaching and learning

Lessons, material, attendance, assignments, examinations and results.

04 Institution operations

Fees, library, staff, assets and the reports needed to review them.

Not every module or integration is enabled for every institution. A tailored demo should show the roles, records and exceptions relevant to your setup.

MAKE THE DEMO COUNT

Ask to see the work, not a slide deck.

Bring a fictional student and the people who would actually use the system. These checks reveal whether records remain correct when a workflow changes.

School walkthrough

- Enrol a student and place them in the right class or Section.
- Mark attendance, then open the earlier date after a roster change.
- Compare assigned teacher and guardian views with an unauthorised view.
- Trace a fee or library record to its underlying transaction.

College walkthrough

- Take an enquiry through application, decision and enrolment.
- Assign a programme, course and batch; inspect the faculty view.
- Record an assessment or attendance correction.
- Reconcile a receipt and follow a library issue through return.

Questions before rollout

- Which team owns each student field, correction and approval?
- How will existing student, admission, financial and file records be reconciled?
- What happens when a role lacks access, an upload is missing or a payment is unconfirmed?
- What are the agreed performance, backup, support and rollback checks?

Request a tailored walkthrough

Tell us your institution type and the workflow you want to test. Visit edumatica.io/book-demo/ or write to sanjeev@edumatica.io.

This brochure describes product areas, not a promise that every module, payment provider or integration is active in every deployment. Updated 4 October 2026.
